QME QUENTIN MOREL ENGINEERING

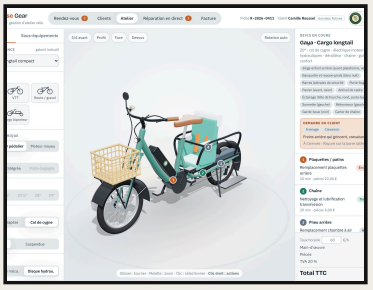

Custom tools · Websites and web apps
Automation · AI · Remote, based in France

Your business has its own processes. I build the tool that fits them.

Whatever your trade, whatever your need, I design a custom tool. Web app, website, automation or no-code workspace: we start from the way you work, not from off-the-shelf software.

Thalvego · hydropower schemes in 3D, each worksite in a detailed view

BikePulse Gear · bike workshop, quotes built on the bike in 3D

Bricabulle · nursery management with accurate billing

TODAY	WITH YOUR TOOL
Duplicate spreadsheets, information lost in emails, data typed twice, forgotten follow-ups, dashboards rebuilt by hand.	One up-to-date source, tasks that trigger themselves, a view for each role, figures you read at a glance.

Custom-built, whatever your trade

Hydropower, retail, professional practice, engineering firm, nursery, gym, health, non-profit: each tool below was designed for a specific trade.

ENGINEERING FIRMS

Drawing approvals

Confidential client. Documents by work package, approval status, reviewer workload, risks for the site.

CROSSFIT GYM

Box ABCD

Competitions planned in 3D: lanes, teams, equipment, heats and live leaderboard.

HYDROPOWER

Thalvego

3D model of operating sites: structures, worksites, alerts and reservoirs on the real terrain.

CLINICAL RESEARCH

Rebar Interactive

US client. Collaborative project management platform, delivered in phases.

PROJECT MANAGEMENT

Nexora

Web app for tasks, meetings and Gantt charts, with AI agents that keep tasks up to date.

HEALTH · NUTRITION

NutriQuest

Describe a meal in one sentence or a photo: AI computes the intake and fills in the spreadsheet.

PHARMACY

PharmaPilot

Business management tool designed with and for a pharmacy.

EVENTS

Nozze Maestria

Business management software for wedding planners.

Your trade is not listed? The tool is built around it.

Overleaf: tools, method, contact

The right tool, chosen for your need

QME

I do not sell software: each tool is designed for one client and their trade. We look at the way you work, what the team already uses and the budget, then pick the simplest solution that does the job.

Custom web apps

When no software fits: a specific trade, several roles, a 3D view, billing tailored to your business.

React · Supabase · Firebase · Web 3D

Websites

Company website or product page, with a demo video and a contact form.

Fast static sites · Netlify · forms

No-code workspaces

When the team already works there: databases, role-based views, dashboards and automations inside the existing tool.

Notion · ClickUp · Trello · Coda · Microsoft 365 · Google Workspace

Automation and AI

What repeats runs by itself: emails sorted, documents filed, tasks created, reports sent.

Apps Script · Power Apps · Claude, ChatGPT · MCP connectors

Also built

- **Inbox sorted by AI**: labels, tasks created, attachments filed in Drive.
- **Series production** (US client): synced Drive folder tree, file uploads.
- **Auto-colored calendar** following rules you edit yourself.
- **Financial dashboard** fed daily by bank statements.
- **Paid contributors** (US client): submission, review and payment tracked.
- **Ready-to-use templates**: CRM, rental management, client onboarding, team goals.

The method, in four steps

1
30-minute call
The process that wastes your time.

2
Choice of tool
Existing, no-code or custom, depending on need and budget.

3
Prototype
Usable within days, adjusted with you.

4
Go-live
Data migrated, team trained, ongoing changes.

Targeted automation
One pain point solved, 2 to 3 days

Custom tool
Your whole process, 5 to 10 days

Monthly support
Changes and support as you go

"His ingenuity and creativity know no bounds."

A project management client

Quentin Morel, engineer and project manager for 15 years, 7 of them in an engineering firm. I design tools, websites and web apps for a wide range of trades.

Let's talk about your process.
